

Core Z

Basic Masternode Guide
Hot wallet

Requirements:

- 2001 CRZ
- Windows VPS
- OPEN PORT: 34765

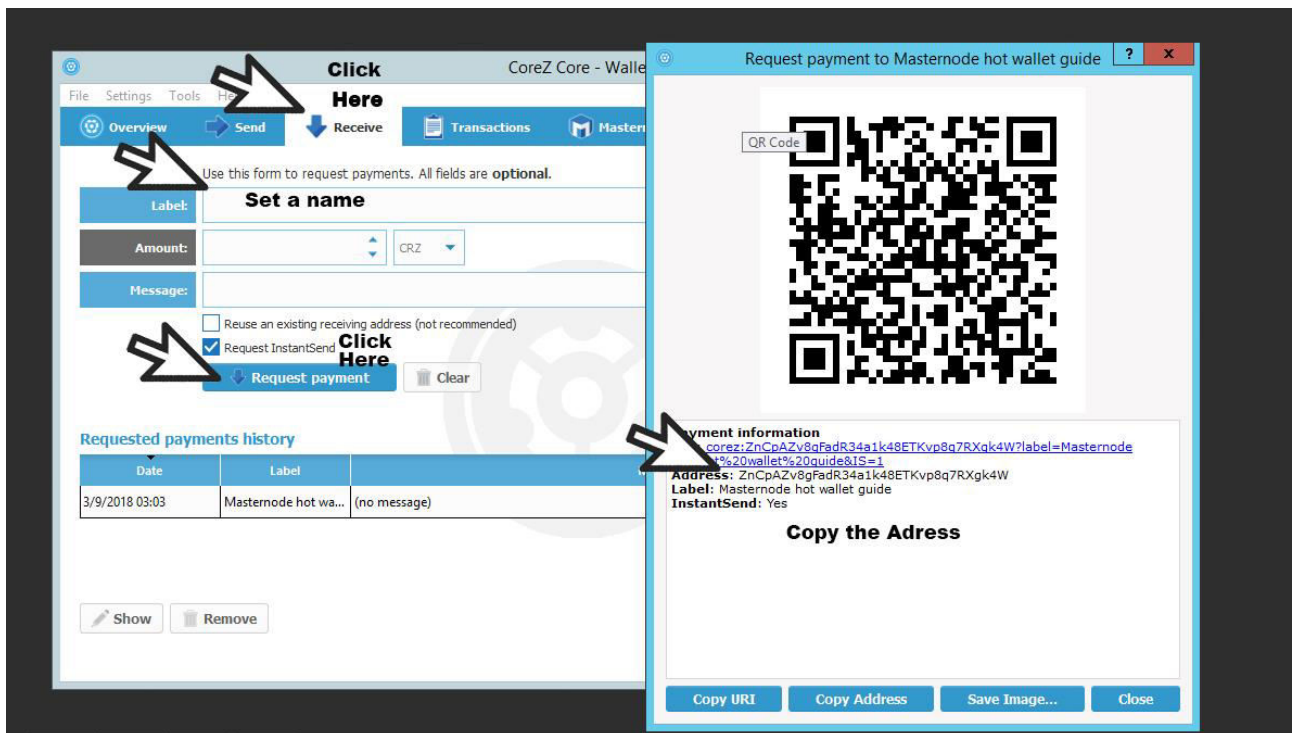

How to open ports in VPS with windows Firewall

<https://www.windowcentral.com/how-open-port-windows-firewall>

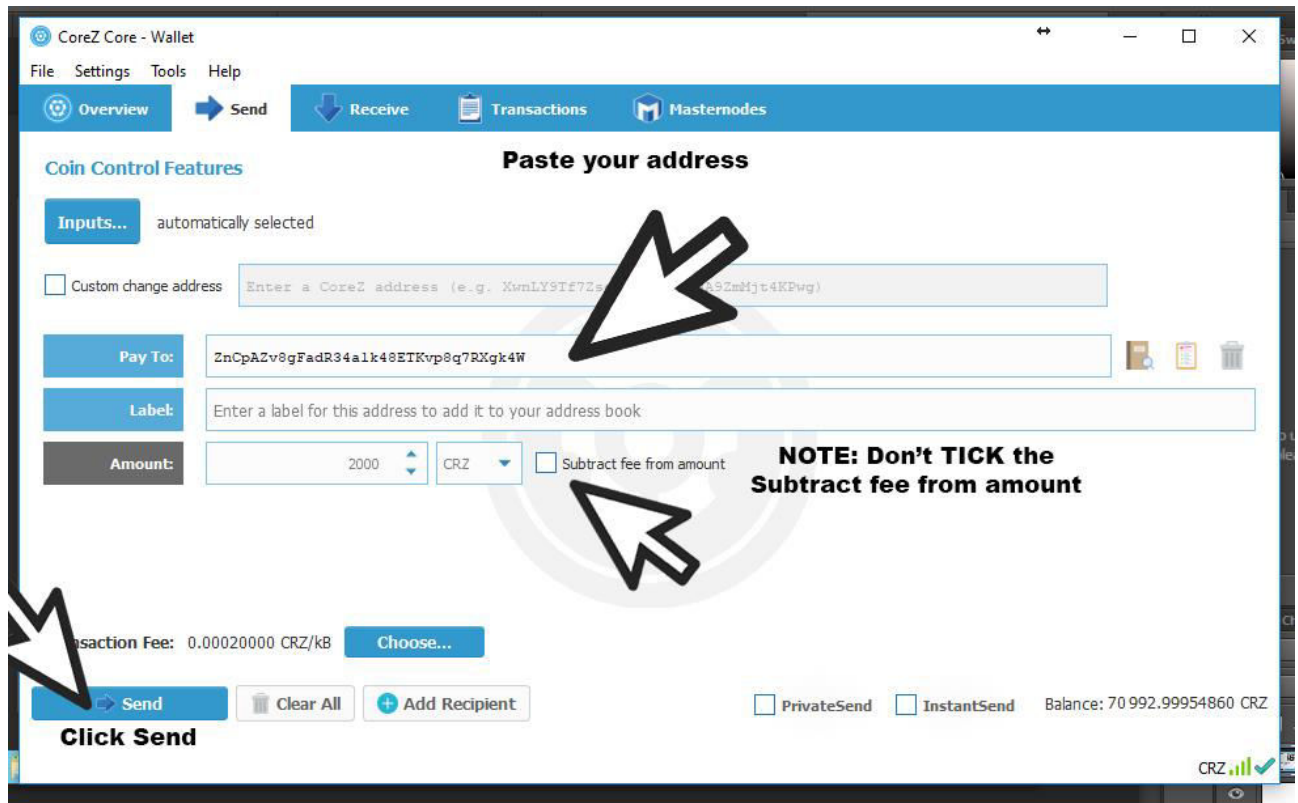

Step 1: Download the wallet and let it be fully synchronized

<https://github.com/corezcrypto/corez/releases/download/0.12.1.3/CoreZ-Win32.zip>

- Open the wallet and Create new address

- Sent to your new address exactly 2000 CRZ
- Wait till you get at least 6 Confirmations

Tools >> Open Wallet configuration file

Now copy the bellow text into the wallet configuration and keep it open

```

masternode=1
externalip=
masternodeprivkey=
listen=1
server=1
demon=1
maxconnections=256

```

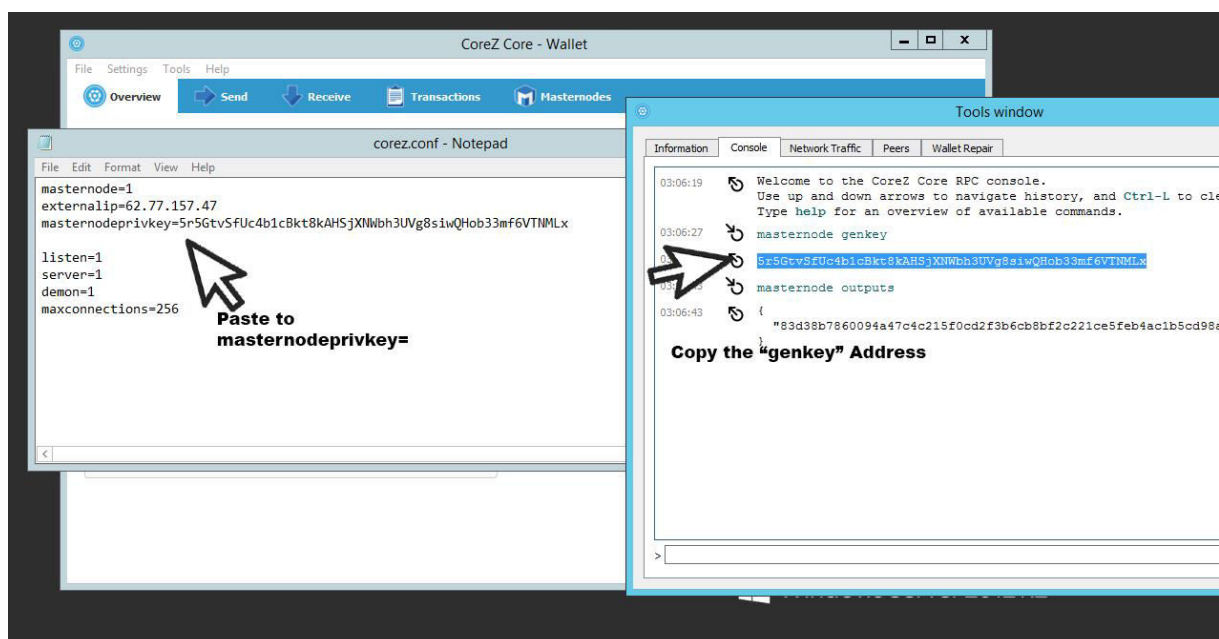

Tools>> Debug Console

Copy the masternode genkey result to your masternodeprivkey=
And also your Public IP

masternodeprivkey=Your private key
externalip=YOUR IP

Should look like this:

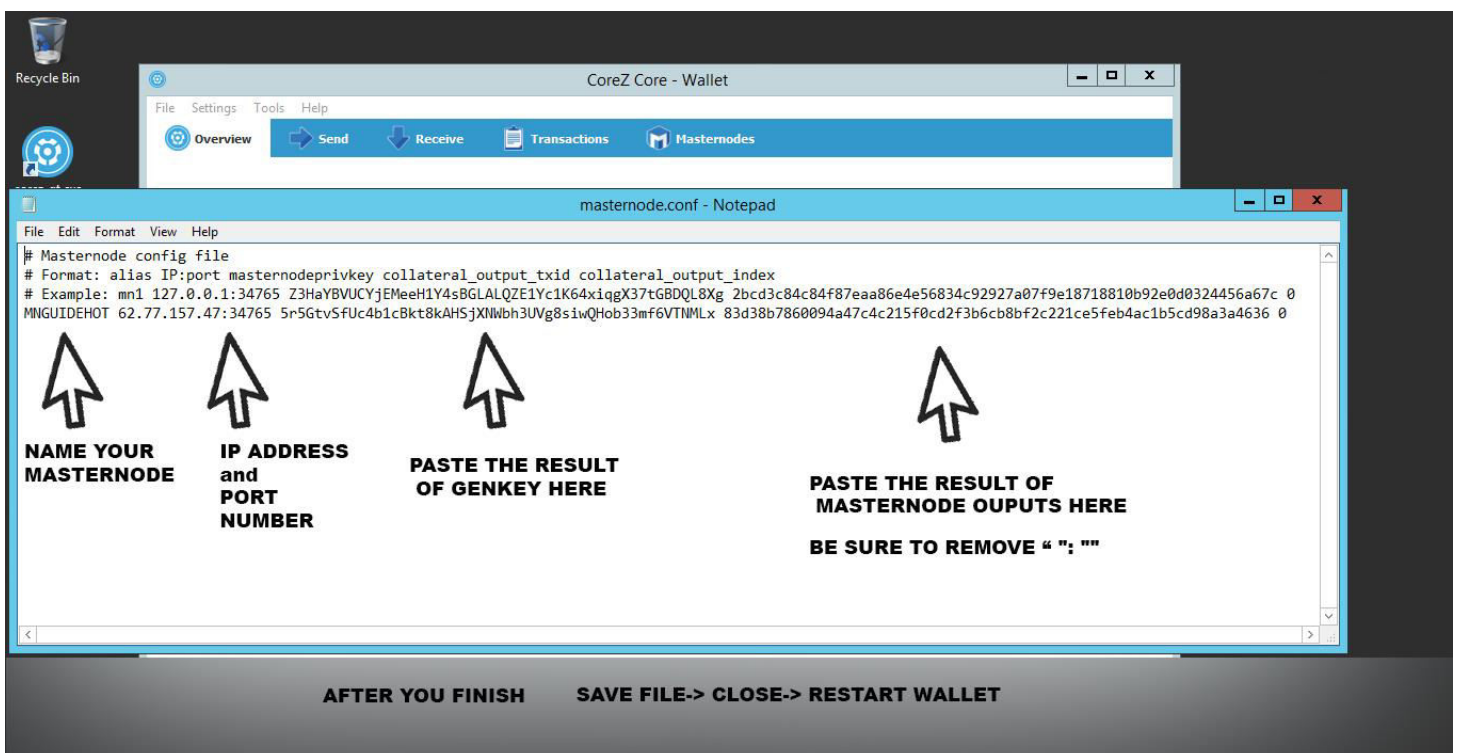

Save configuration file and exit
Keep the debug console open

Now open masternode configuration file. TOOLS>> Open masternode configuration file

Go to debug console and copy the masternode outputs result, be sure to remove “.” from the text and only have letters and numbers after you have pasted it.

Type in your preferred MN name ,IP Address and Port, Genkey Result, Masternode outputs result

Should look like this

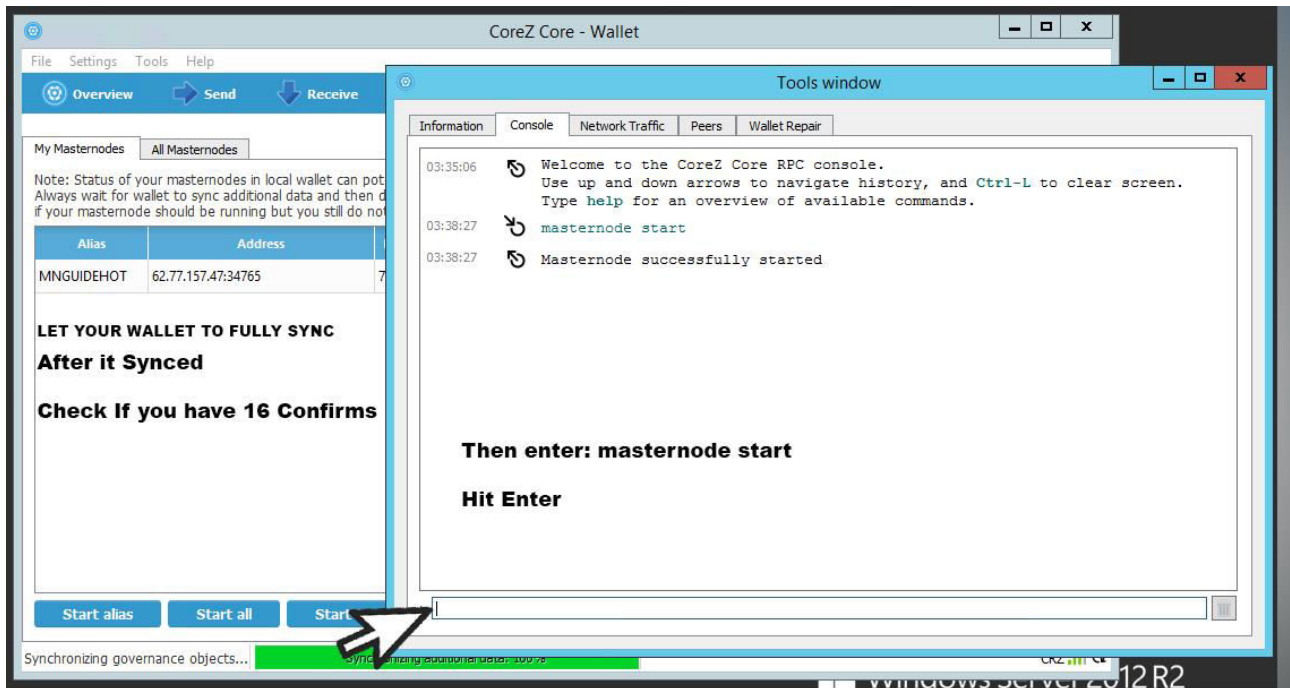

Save Masternode configuration file and exit

Now Restart wallet and let it be fully synced check if you have 16 confirmations or more.

After it has been fully Synced open debug console TOOLS>> DEBUG CONSOLE

Type in `masternode start` and hit Enter

That's it your masternode is running
